

ASTR 129L Introductory Astronomy I Lab
Student Introductions
5 September 2012

Find someone in the class to "pair off" with; preferably someone you don't already know. Interview each other. You will introduce your partner to the class (briefly, not their whole life story). Besides their name, we might be interested in where they are from, what they are planning to major in, and why they are interested in astronomy. What astronomy experience have you had, and what you are looking forward to learning about this semester. Make a few notes...

A) _____ interviewed by _____

B) _____ interviewed by _____
