

ASTR 129 Introductory Astronomy I
29 August 2011

NAMES: _____

Form a group of 2. One of you will pretend that you saw a UFO in the sky last night. Describe to your partner **where in the sky** you saw the UFO. The other person should ask whatever questions are necessary to understand what you are saying and will jot down a few notes below so that I can have an idea of what kind of description you were using. Turn this paper in at the end of class.
