

ASTR 129 Introductory Astronomy I
In-class Exercise #3

Names: A) _____ B) _____
C) _____ D) _____

Find 3 other people in the class to work with; preferably people you don't already know. Make a list of anything you can think of that **CHANGES WITH THE SEASONS**. You should be able to come up with at least 5 “facts” about the seasons, and hopefully more! Think of things that are different in the summer than they are in the winter. As we will soon see, most (if not all) of these seasonal differences have an astronomical explanation.
